

# QUALITY EQUIPMENT & SOLUTIONS PVT. LTD.

(QESPL)

## POWERING PROGRESS EQUIPPING TOMORROW

# About Us

Quality Equipment & Solutions Pvt. Ltd. (QESPL) is a Pune-based company built for one purpose: to give India's builders, contractors, and infrastructure developers an equipment partner they can actually rely on. Backed by more than 15 years of combined industry experience, our team supports construction and material handling projects nationwide with equipment sales, rentals, spare parts, technical services, and complete project support, all under one roof.

From residential towers and commercial complexes to metro corridors, refineries, and power projects, we help our clients keep their sites moving, cut down on downtime, and get more productive hours out of every machine they run. Our approach is simple: understand the project, recommend the right equipment, and stand behind it with dependable after-sales support.

Together, Gaurav and Rahul bring a shared commitment to building one of India's most trusted names in construction equipment, grounded in reliability, transparency, and genuine customer partnership.

## 15+ YEARS OF COMBINED INDUSTRY EXPERIENCE

Our leadership team brings extensive, hands-on experience across construction equipment, project execution, equipment management, sales, rentals, and customer support. That experience translates into practical, efficient equipment solutions for every project, whatever the scale or site conditions.

# Vision, Mission & Operations

## OUR VISION

To build one of India's most trusted construction equipment solution providers by delivering reliable equipment, transparent business practices, and exceptional customer support, while contributing to the growth of the nation's infrastructure.

## OUR MISSION

- Provide high-quality construction equipment solutions that maximise customer productivity.
- Offer dependable sales, rental, and after-sales support under one roof.
- Build long-term relationships through integrity, transparency, and technical expertise.
- Continuously innovate and expand our services to meet the changing needs of the construction industry.
- Become the preferred partner for contractors, infrastructure companies, and industrial clients across India.

## WHERE WE SERVE & AVAILABILITY

- **Service Reach:** We serve customers Pan India, supporting infrastructure, industrial, commercial, power, metro, refinery, and real estate projects of every scale.
- **Operational Schedule:** Monday – Saturday, ready to support your project timelines.

# What We Offer

A single point of contact for everything your project needs, from sourcing the right machine to keeping it running at peak performance.

## 1. Construction Equipment Sales

New and used construction and material handling equipment from trusted, globally recognised brands, matched to your project's scale, budget, and timeline.

## 2. Equipment Sourcing

Not sure which machine fits your site? Our team helps you identify the right equipment based on lifting capacity, height, site conditions, and project requirements.

## 3. Project Equipment Support

End-to-end support through erection, deployment, operation planning, and dismantling, so your equipment is working exactly when and where you need it.

## 4. Equipment Refurbishment

Professional refurbishment services that extend the working life of your machinery, improve reliability, and help you get more value from every asset.

# Lifting Solutions

## OUR PRODUCT RANGE OVERVIEW

A comprehensive fleet of construction lifting and handling equipment, sourced from trusted global manufacturers including **Potain, Liebherr, Zoomlion, ACE, XCMG, and SANY** — supplied new or as thoroughly inspected used equipment, and backed by our own technical and after-sales support team.

## Tower Cranes

### The backbone of every high-rise project

Our tower cranes are built to lift steel, concrete, formwork, and heavy machinery to great heights with precision, stability, and repeatable performance shift after shift. We supply a full range of capacities and configurations from established global names, so you get a crane matched to your building's height, load profile, and site footprint — not a one-size-fits-all machine.

- **Trusted Brands:** Sourced from manufacturers such as Potain, ACE, Liebherr, and Zoomlion for proven reliability.
- **Flat-Top & Topless Configurations:** Suited to dense sites where multiple cranes need to operate in proximity.
- **Full Lifecycle Support:** Erection, climbing, dismantling, and preventive maintenance handled by our technical team.
- **Ideal For:** Residential towers, commercial complexes, and large-scale infrastructure builds.

# Luffing Tower Creanes

## Built for tight sites and tighter boundaries

When a project sits close to neighbouring buildings, roads, or airspace restrictions, a standard tower crane's fixed jib isn't always practical. Our luffing jib cranes raise and lower their jib angle to shorten their working radius on demand, letting you lift safely in congested urban environments without slewing over adjoining properties.

- **Variable Working Radius:** Adjusts jib angle to work within tight, irregular, or shared site boundaries.
- **Reduced Slewing Conflicts:** Ideal for multi-crane sites and locations near flight paths or restricted zones.
- **Strong Capacity Retention:** Maintains lifting performance even at reduced radius.
- **Ideal For:** Dense urban high-rises, sites with boundary-line restrictions, and projects near existing structures.

# Product Range

Access & Concrete Placement **PASSENGER HOISTS** Moving your workforce as efficiently as your materials

Passenger and material hoists keep high-rise sites productive by cutting the time crews spend climbing stairs and waiting for shared lifts. Our hoists are supplied with the safety interlocks, load monitoring, and control systems needed to move people and materials vertically with confidence, even as the building grows floor by floor

- **Dual-Purpose Use:** Configurable for passenger transport, material movement, or combined loads.
- **Safety-First Design:** Overload protection, emergency stop systems, and interlocked gates as standard.
- **Scalable Height:** Extendable mast sections to keep pace with the building as it rises.
- **Ideal For:** High-rise residential and commercial towers with heavy daily foot and material traffic.

## Static Boom Placers

**Precision concrete placement, even in the hardest-to-reach corners**

Static boom placers extend a concrete pump's reach across a site, delivering an accurate, continuous flow of concrete to areas that ready-mix trucks and manual chutes simply can't reach efficiently. This means fewer manual handling steps, more consistent pours, and pour schedules that stay on track even on complex floor plates.

- **Extended Reach:** Delivers concrete to upper floors and hard-to-access site zones without repositioning trucks.
- **Consistent Output:** Reduces segregation and cold joints compared to manual placement methods.
- **Site-Mounted Stability:** Anchored placement reduces the footprint needed compared to mobile pumps.
- **Ideal For:** High-rise pours, congested sites, and projects with tight concrete scheduling windows.

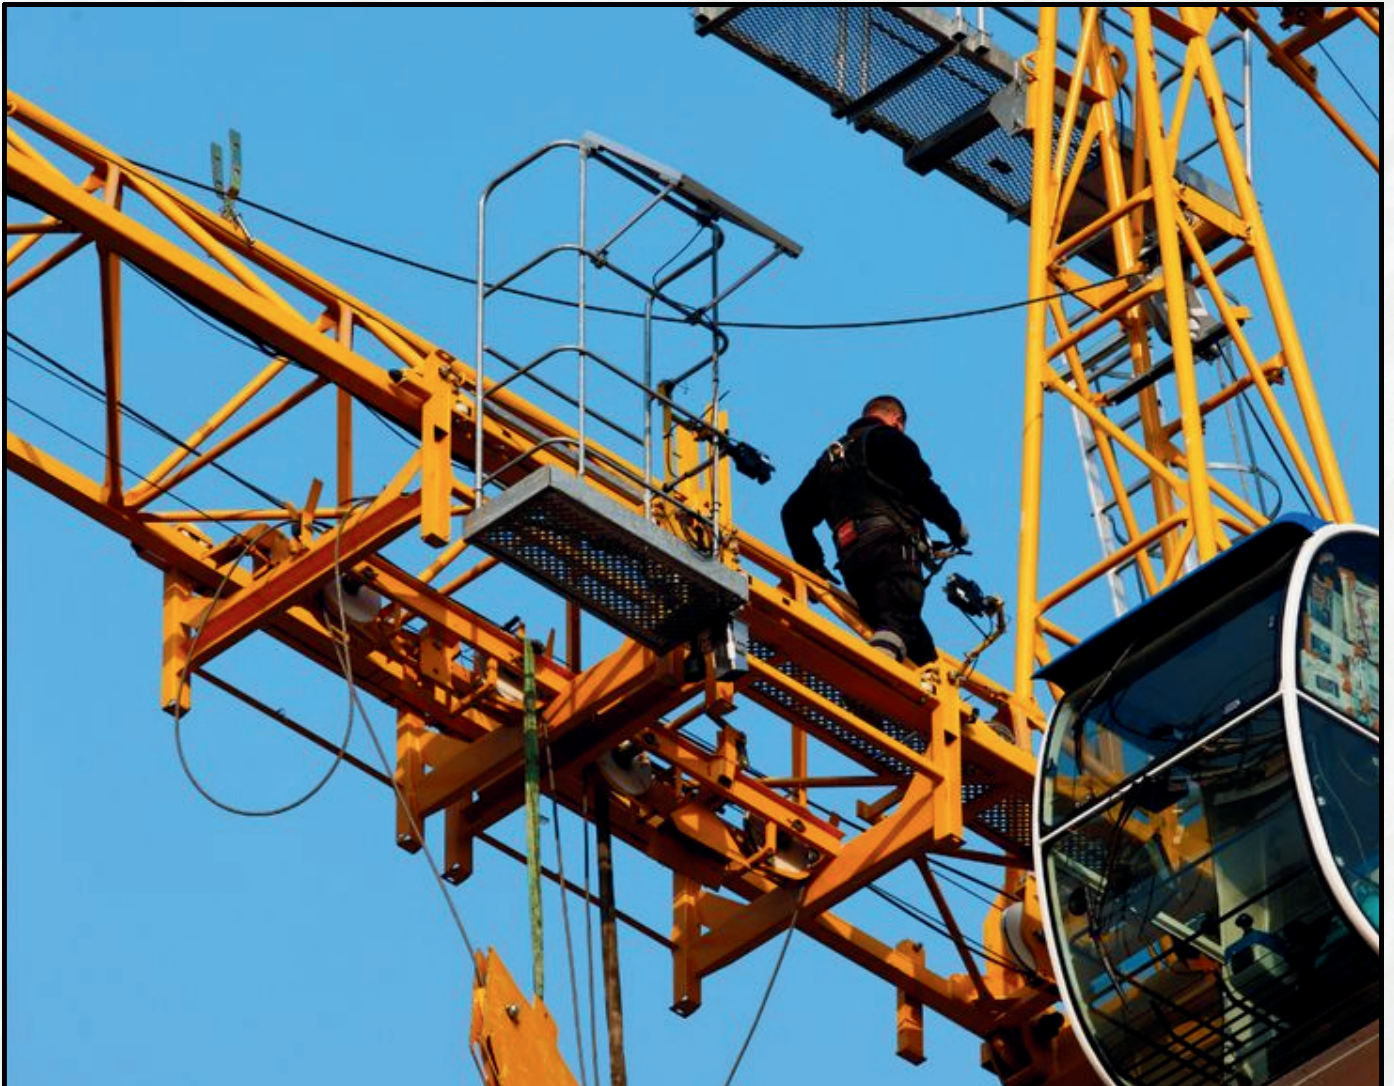

# Product Range

Specialized & Yard Machinery DERRICK CRANES Heavy lifting where a tower crane won't fit

On ultra-constrained urban sites, rooftop extensions, or projects with severe height and boundary restrictions, a conventional tower crane isn't always feasible. Derrick cranes offer a compact-footprint alternative with strong load-handling capability, and can even be relocated or 'walked' up a structure as construction progresses.

- **Compact Footprint:** Operates effectively where space for a standard tower crane base isn't available.
- **Relocatable Design:** Can be repositioned or climbed as the structure rises.
- **Reliable Heavy Lifting:** Strong capacity-to-footprint ratio for structural steel and precast elements.
- **Ideal For:** Rooftop additions, ultra-tight urban plots, and constrained retrofit or renovation projects.

# Rubber Tyre Gentry (RTG) Cranes

## Mobile lifting power for yards and industrial sites

Unlike rail-mounted systems, rubber tyre gantry cranes move freely across a yard on their own wheeled undercarriage, making them a flexible choice wherever equipment needs to be repositioned without laying fixed infrastructure. They're a strong fit for precast yards, industrial storage areas, and material handling operations that need reach and mobility in equal measure.

- **Full Mobility:** No rail infrastructure required, freeing up yard layout and reducing setup time.
- **Wide Span Coverage:** Handles long, heavy loads such as precast beams and structural sections.
- **Durable Undercarriage:** Built for repeated movement across yard and industrial surfaces.
- **Ideal For:** Precast concrete yards, industrial material handling, and large open storage or fabrication sites.

# Why Choose QESPL

- **15+ Years Experience:** Combined industry expertise across sales, rentals, and project execution.
- **Pan-India Footprint:** Supporting infrastructure, industrial, commercial, power, metro, refinery, and real estate projects.
- **Global Brands:** Direct access to trusted global equipment brands, available new or used.
- **End-to-End Partnership:** Sales, rentals, spare parts, technical services, and project assistance under one roof.
- **Integrity First:** Transparent, customer-first business practices.
- **Reliable Availability:** Responsive service, available Monday through Saturday.

## Let's Build Your Next Project Together

Whether you need a single tower crane or complete equipment support for a multi-phase development, QESPL is ready to help you plan, source, and execute with confidence. Get in touch today for a free consultation and a custom quote for your project.
